ABSTRACT

This report details graduation and persistence rates for degree-seeking students at the seven University of Hawaii Community Colleges (UHCC) from Fall 1987-Fall 1995. The data are from the National Center for Higher Education Management Systems/University of Hawaii System Longitudinal Database Project. The report focuses on full-time and part-time students and first-time and transfer students. Data on graduation rates include both associate and baccalaureate degrees. A glossary of key terms, highlights from the data tables and a summary of the overall findings are included. According to the persistence data, 53 percent of degree-seeking students who begin at one of the UHCC campuses will return for their second year. Students of Japanese, Chinese, and Filipino ancestry have the highest one-year persistence rates. The data do not reveal a notable difference between men and women in overall persistence patterns, however, women maintain slightly higher graduation rates than men after six years, 28 percent to 25 percent respectively. The graduation section reports that close to 27% of degree-seeking students entering the UH community colleges can be expected to graduate within six years of entry; about 19 percent earn an associate degree over an average period of 3.3 years; and women maintain slightly higher graduate rates than men after six and eight years. The document provides explanations of the data tables throughout the report. (TGO)

Special Report

GRADUATION AND PERSISTENCE RATES
UNIVERSITY OF HAWAI'I COMMUNITY COLLEGES
FALL 1987 – FALL 1995 COHORTS

This special report highlights graduation and persistence rates for degree-seeking students at the University of Hawai'i Community Colleges, which consist of the following seven campuses: Hawai'i, Honolulu, Kapi'olani, Kaua'i, Leeward, Maui, and Windward. Data are from the NCHEMS / University of Hawai'i System Longitudinal Database Project, conducted by the National Center for Higher Education Management Systems (NCHEMS) in 1991. The database has since been updated and maintained by the University of Hawai'i Office of Information Technology Services and the Institutional Research Office.

The database for this report is a series of longitudinal cohort files for students entering a UH community college in Fall 1987 through Fall 1995. Academic histories for these students were compiled and updated through Fall 1996. Cohorts include only undergraduates with no previous history of attending a UH institution. Thus, only first-time students and transfers from non-UH campuses are included in each of the cohorts. Transfers into a UH community college from other UH campuses are excluded from the cohorts.

This report focuses on the degree-seeking undergraduate students in each cohort, and includes full- and part-time students, as well as first-time and transfer students. Data on graduation rates include both associate degrees as well as baccalaureate degrees (though their numbers are very small). Therefore, the cohorts in this study differ from the traditional student tracking cohort of first-time, full-time degree-seeking undergraduates. Also, the numbers of first-time and transfer students in each cohort differ from figures reported in the Management and Planning Support (MAPS) reports. The numbers reported herein have been compiled by searching records back to Fall 1983 to verify that a first-time student is indeed new to the University of Hawai'i system, and the transfer numbers have been screened to include only students from non-UH institutions. For the MAPS reports, a student's first-time status is self-reported at time of entry, and transfer students include those from other UH campuses.

Definitions

Graduation rates represent the proportion of students in a given cohort who started at a UH community college and who were subsequently awarded a degree. Graduation rates are cumulative; that is, they represent the proportion of a starting cohort who were awarded a degree in any term up to and including the term in question. Note that average rates may occasionally decline because fewer and fewer cohorts are used to compute the averages each year. ***Persistence rates*** represent the proportion of students in a given cohort who started at a UH community college and were enrolled in successive fall terms. Included in the persistence rates are both students who enrolled and students who graduated in the term in question. A student in a given cohort who fails to enroll for a term or terms and subsequently re-enrolls is included in the persistence rate calculation for the term of re-enrollment.

There are three types of graduation and persistence rates reported here. ***Systemwide rates*** are the proportions of students who started at a UH community college and who graduated or persisted either at the starting campus or another campus in the UH system. ***Starting campus rates*** are the proportions of students who started at a UH community college campus and

graduated or persisted at that campus only. ***Other campus rates*** are the proportions of students who started at a UH community college and who graduated or persisted at another UH campus. Systemwide rates equal the sum of starting campus and other campus rates. This report contains rates out to the eighth year after entry.

Average years to graduate in a six-year period is a measure of how long it takes on average for students to graduate within a six-year period; that is, the average length of time to graduation for those students graduating within six years of entry. This average should not be confused with "time to degree"; that is, the average length of time to graduation for those students graduating in a specific term or year. The first measure tracks entering cohorts forward in time for six years. The second measure takes a given graduating class and tracks them back in time to determine how long, on average, a student took to graduate.

Unless otherwise indicated, all rates referred to below are systemwide rates. Graduation rates are six-year rates.

Graduation Rate Highlights

- On average, close to 27% of degree-seeking students entering the UH community colleges can be expected to graduate within six years of entry. About 16% will graduate from their starting campus while 10% will graduate from another UH campus, predominantly to earn a bachelors degree.

- Beyond six years, graduation rates increase only slightly, and by the end of the eighth year close to one-third of the starting cohorts have earned degrees.

- For those graduating within a six-year period, the average number of years to graduate is 3.8 years. Students graduating from their starting campus average 3.2 years, while students graduating from other UH campuses average 4.9 years.

- Systemwide, about 19% will earn an associate degree and average 3.3 years to do so over a six-year period. In the same time period, 8% will earn a bachelors degree and average 5.1 years to do so.

- Overall, graduation rates for transfer students are slightly higher than first-time students, 10% compared to 4% by the end of the second year. The difference narrows over the tracking period and after the sixth year 29% of transfers and 26% of first-time students have earned degrees. Thus, average number of years to graduate over a six-year time frame is lower for transfers.

- Women maintain slightly higher graduation rates than men, 28% to 25% after six years, 34% to 29% after eight years. Average number of years to graduation within a six-year period however, is almost the same; 3.9 years for women and 3.8 years for men.

- Overall, students of Chinese backgrounds have the highest graduation rate at 39%, while students of Hawaiian ancestry have the lowest rate at 20%. A higher proportion of Chinese students graduate from a UH institution other than their starting campus. Filipino students on the other hand, have a greater tendency to graduate from the campus where they began their studies.

- Of all the ethnic groups, Caucasian students complete their studies in a somewhat shorter time period. Average number of years to graduate within a six-year period is 3.4 years systemwide and 2.8 years at the starting campus. In comparison, Japanese and Chinese students average 4.3 years systemwide and 3.5 years at the starting campus.

Persistence Rate Highlights

- On average, 53% of entering students are still enrolled systemwide after one year, 47% at the starting campus and 6% at other UH institutions. About 13% are still enrolled within the UH system after six years, with a greater proportion enrolled at another UH campus.

- Of the community college starters, many students transfer to other UH institutions to earn a degree. After three years, 17% are enrolled at the starting campus and 13% are enrolled at other UH campuses. From the fourth year onward, there are proportionately more students enrolled at another UH institution than there are at the starting campus, with the majority pursuing a bachelors degree.

- First-time students have higher persistence rates than transfer students, 54% to 48% after one year, and 14% to 7% after six years. However, lower persistence for transfers may be attributed to their higher graduation rates.

- Overall, men and women display similar patterns of persistence throughout the tracking period.

- Students of Chinese ancestry have the highest one-year persistence rate at 68%, followed by Japanese students with 65%, and Filipino students with 59%. After six years, 24% of Japanese students are still enrolled within the system, 17% enrolled at other UH institutions, the highest persistence rate of all the ethnic groups.

Summary

- Systemwide, over one-half (53%) of degree-seeking students who begin their studies at one of the UH community colleges will return for their second year. Students of Chinese, Japanese, and Filipino ancestry have the highest one-year persistence rates while students of Caucasian and Hawaiian ancestry have the lowest. Overall, men and women display similar patterns of persistence.

- Though each individual campus differs both in size and curriculum, Leeward Community College has the highest systemwide and starting campus persistence rates, 56% and 52% respectively. Kapi'olani boasts the highest other-campus persistence levels, 8% after one year, up to 12% after two years.

- On average, a little over one-fourth (27%) will earn a degree after six years. For those seeking associate degrees, 5% will graduate within the traditional two-year period, 11% will graduate in three years and 19% will graduate in six years. Beyond that, very few students earn associate degrees; the eight-year systemwide graduation rate is 20%. For those transferring to another UH campus to pursue a bachelors degree, 2% will graduate within four years, about 8% within six years, and up to 12% at the end of eight years.

- Women have slightly higher graduation rates than men. Overall, students of Chinese, Japanese, and Filipino ancestry have the highest graduation rates while students of Hawaiian and Other ethnic backgrounds have the lowest.

- Overall, Leeward Community College has the highest systemwide graduation rate, 33% after six years and 40% after eight years. Kaua'i has the highest starting campus graduation rate at 24% and thus, the highest rate for associate degrees earned systemwide at 26%. For bachelors degrees, Leeward maintains the highest rate at 10%. Within the traditionally designed two-year period for a community college program, Hawai'i CC has the highest graduation rate at 10%.

Summaries are provided for each individual campus and are located at the beginning of their respective sections.

1/ Average years to graduate can in a six year period can only be calculated for those cohorts that have been enrolled for six years or more. Therefore, from 1989 to 1993 data is not yet available.

2/ Numbers of graduates and the graduation rates calculated are culmulative from year to year.

Table 3b - detailed table
STARTING CAMPUS GRADUATION RATES - as of Fall 1996

1/ Average years to graduate can in a six year period can only be calculated for those cohorts that have been enrolled for six years or more. Therefore, from 1989 to 1993 data is not yet available.

2/ Numbers of graduates and the graduation rates calculated are culmulative from year to year.

1/ Numbers of students enrolled and the percentage of the original cohort who continue to persist will generally decrease over time.
2/ Caucasian ethnicity includes Portuguese.

Hawai'i Community College

Graduation Rate Highlights:

- On average, about 27% of degree-seeking students can be expected to graduate within six years, comparable to the overall UH community college average. About 17% will graduate from the starting campus while the remaining 10% will graduate from other UH institutions.

- In the traditional two-year time frame, Hawai'i CC has the highest graduation rate at 10%, double that of the UH community college average. Rates remain slightly higher than the overall average, but level out in later years so that one-third of the starting cohort has earned a degree by the end of the eighth year.

- Students graduating from Hawai'i CC (the starting campus) average 2.8 years, the shortest time among all other community college campuses. Systemwide, Hawai'i CC starters average 3.6 years, compared to the UHCC average of 3.8 years.

- Systemwide, transfers have higher graduation rates than first-time students, 32% to 27% after six years and 42% to 31% after eight years. Overall, a greater proportion of first-time students earn associate degrees at Hawai'i CC while a greater proportion of transfer students earn bachelor degrees from other UH campuses.

- Men have significantly higher graduation rates than women, 17% to 4% after two years and 31% to 24% after six years. Thus, average number of years to graduate over a six-year time frame is lower for men by about one year. However, men have a greater tendency to graduate from the starting campus while a greater proportion of women transfer and graduate from other UH campuses.

- Students of Japanese ancestry have the highest graduation rate, 41% after six years and up to 48% after eight years. Filipino students have the second highest rate and lowest average number of years to graduate at 2.9 years. However, a greater proportion of Filipino students remain and graduate from Hawai'i CC.

Persistence Rate Highlights:

- On average, 55% of entering students are still enrolled after one year, 49% at Hawai'i CC and 6% at other UH campuses. This is higher than the overall community college average, but by the end of the second year rates drop sharply to 35%, compared to 39% for the community college system.

- After one year, 56% of men and 53% of women have re-enrolled. From the second year onward, persistence rates are higher for women, both at the starting campus and other UH campuses. However, this may be due to higher graduation rates for men.

- Students of Japanese ancestry have the highest one-year persistence rate at 75%, followed by Filipino (63%) and Chinese (61%) students. Those of Caucasian and Hawaiian ancestry have the lowest rate at 49%. A large proportion of Japanese and Chinese students transfer and persist at other UH campuses; after six years, there are still 19% of Japanese students and 11% of Chinese students enrolled at other UH institutions.

1/ Average years to graduate can in a six year period can only be calculated for those cohorts that have been enrolled for six years or more. Therefore, from 1991 to 1995 data is not yet available.

2/ Numbers of graduates and the graduation rates calculated are culmulative from year to year.

Table A-3b - detailed table

1/ Average years to graduate can in a six year period can only be calculated for those cohorts that have been enrolled for six years or more. Therefore, from 1991 to 1995 data is not yet available.

2/ Numbers of graduates and the graduation rates calculated are culmulative from year to year.

1/ Numbers of students enrolled and the percentage of the original cohort who continue to persist will generally decrease over time.
2/ Caucasian ethnicity includes Portuguese.

Honolulu Community College

Graduation Rate Highlights:

- On average, one-fourth of degree-seeking students will earn a degree after six years, 19% at Honolulu and 6% at other UH campuses. The 25% systemwide rate is slightly below the overall UH community college average, but students starting at Honolulu have a greater tendency to graduate there. Beyond six years, an additional 4% will earn a degree; the system-wide graduation rate after eight years is 29%.

- Over a six-year period, students average 3.2 years to graduate from Honolulu. This is comparable to the community college average, despite somewhat higher starting campus graduation rates.

- Overall, a majority of first-time students earn degrees from the starting campus, whereas almost an equal proportion of transfers graduate from the starting campus as from other UH campuses. Over a six-year period, transfers take less time to graduate, especially at the starting campus (2.6 years compared to 3.2 years).

- Overall, men have slightly higher graduation rates than women. But rates for men are higher at the starting campus whereas rates for women are higher at other UH campuses.

- Japanese and Chinese students have the highest systemwide graduation rates at close to one-third, followed by Filipino students at 30%. At the starting campus, Caucasian students have one of the lowest graduation rates, but manage to earn their degrees faster, averaging 2.5 years to graduate within a six-year period.

Persistence Rate Highlights:

- On average, about half of the entering students return one year after entry, 44% at Honolulu and 5% at other UH campuses. This is somewhat below the overall UH community college average, but as with graduation rates, Honolulu's students show a greater tendency to remain at their starting campus.

- After one year, 51% of first-time students and 45% of transfers have re-enrolled. Despite somewhat comparable graduation rates, first-time students maintain higher persistence throughout the period.

- Men have slightly higher persistence rates than women initially, but rates are somewhat comparable in later years.

- Students of Chinese and Japanese ancestry have the highest one-year persistence rate, 65% and 61% respectively. Students of Hawaiian ancestry have the lowest rate at 41%.

1/ Average years to graduate can in a six year period can only be calculated for those cohorts that have been enrolled for six years or more. Therefore, from 1989 to 1993 data is not yet available.

2/ Numbers of graduates and the graduation rates calculated are culmulative from year to year.

1/ Average years to graduate can in a six year period can only be calculated for those cohorts that have been enrolled for six years or more. Therefore, from 1989 to 1993 data is not yet available.

2/ Numbers of graduates and the graduation rates calculated are culmulative from year to year.

1/ Numbers of students enrolled and the percentage of the original cohort who continue to persist will generally decrease over time.
2/ Caucasian ethnicity includes Portuguese.

Kapi'olani Community College

Graduation Rate Highlights:

- After six years, the systemwide graduation rate at Kapi'olani is 22%, somewhat below the overall UH community college average. Of that 22%, an equal proportion (11%) will earn degrees from the starting campus as well as from other UH campuses. In all, about 9% will earn a bachelors degree while 13% will earn an associate degree.

- Beyond six years, another 7% will go on to graduate, a majority of which have transferred to earn a bachelors degree. Thus, by the end of the eighth year, the systemwide graduation rate reaches 29%.

- Within a six-year time frame, students earning associate degrees from Kapi'olani average 3.7 years to graduate, well above the traditional two-year program. Students earning bachelors degrees at other UH campuses average 5 years to graduate.

- Transfers earn degrees at slightly higher levels than first-time students. Average number of years to graduate over a six-year period is 3.8 years compared to 4.4 years for first-time students.

- Women outperform men in overall graduation rates, 24% to 20% after six years. However, average number of years to graduate is almost the same, 4.3 years for women and 4.4 years for men.

- Chinese students have the highest systemwide graduation rate at 40% after six years, but a greater proportion of them transfer and graduate at other UH campuses. Students of Other and Hawaiian backgrounds have the lowest completion, 17% and 16% respectively. Of all other ethnic groups, Caucasians take the shortest time to graduate over a six-year period; 3.8 years systemwide and 3.2 years at the starting campus.

Persistence Rate Highlights:

- After one year, 54% of entering students are still enrolled systemwide, just above the overall UH community college average despite somewhat lower graduation rates. About 46% will return to Kapi'olani while 8% will re-enroll at other UH campuses. Overall, Kapi'olani maintains one of the highest other campus persistence rates throughout the period. After six years, 17% are still enrolled, 11% at other campuses.

- First-time students maintain higher persistence than transfers throughout the six-year period, but this may be attributed to higher graduation rates of transfer students.

- After one year, 55% of women and 52% of men are enrolled systemwide. Overall, persistence rates by gender are somewhat comparable throughout most of the period.

- Chinese students have the highest one year persistence at 69%, with Japanese students next at 61%. By the end of the sixth year, 16% of Japanese students and 14% of Chinese students are still enrolled at other UH campuses. Hawaiian students have the lowest persistence at 41% after one year.

1/ Average years to graduate can in a six year period can only be calculated for those cohorts that have been enrolled for six years or more. Therefore, from 1989 to 1993 data is not yet available.

2/ Numbers of graduates and the graduation rates calculated are culmulative from year to year.

Table C-3b - detailed table

1/ Average years to graduate can in a six year period can only be calculated for those cohorts that have been enrolled for six years or more. Therefore, from 1989 to 1993 data is not yet available.

2/ Numbers of graduates and the graduation rates calculated are culmulative from year to year.

1/ Numbers of students enrolled and the percentage of the original cohort who continue to persist will generally decrease over time.
2/ Caucasian ethnicity includes Portuguese.

Kaua'i Community College

Graduation Rate Highlights:

- Systemwide, about 32% of entering students can be expected to earn a degree within six years, higher than the overall UHCC average and the second highest graduation rate of the other community college campuses. In addition, Kaua'i has the highest starting-campus graduation rate; of those earning degrees, roughly three-fourths or 24% will graduate from the starting campus.

- Beyond six years, an additional 3% will graduate, most of which have transferred to earn a bachelors degree. Thus, the systemwide graduation rate after eight years is 35%.

- Within a six-year time frame, students take an average of 3.7 years to earn a degree systemwide, and 3.3 years to earn a degree at the starting campus.

- Women display higher graduation rates than men, 34% to 27% after six years. Average number of years to graduate within a six-year period is comparable systemwide, but women take slightly longer at the starting campus, averaging 3.4 years compared to 3.1 years for men.

- Systemwide averages show 67% of Chinese students will earn a degree after six years, up to 100% by the end of eight years. However, this number should be used with caution due to the small number of students in the cohort. Filipino students have the second highest rate at 42%, followed by Japanese students at 32%.

Persistence Rate Highlights:

- About 53% of the entering cohort are still enrolled systemwide after one year, 49% at the starting campus and 4% at other UH campuses. This is the same as the overall UHCC average, but students beginning their studies at Kaua'i show a greater tendency to remain at their starting campus.

- After one year, 53% of women and 52% of men have re-enrolled. From the third year onward, men have higher persistence rates but this may be attributed to higher graduation rates of women. Overall, a larger proportion of men are enrolled at other UH campuses while women have a greater tendency to persist at the starting campus.

- Chinese students have the highest one-year persistence rate (75%), followed by Japanese (65%) and Filipino (62%) students. Caucasian students have the lowest persistence (42%) after one year. Rates should be used with caution however, due to the small number of students within certain cohorts.

1/ Average years to graduate can in a six year period can only be calculated for those cohorts that have been enrolled for six years or more. Therefore, from 1989 to 1993 data is not yet available.

2/ Numbers of graduates and the graduation rates calculated are culmulative from year to year.

Table D-3b - detailed table

1/ Average years to graduate can in a six year period can only be calculated for those cohorts that have been enrolled for six years or more. Therefore, from 1989 to 1993 data is not yet available.

2/ Numbers of graduates and the graduation rates calculated are culmulative from year to year.

1/ Numbers of students enrolled and the percentage of the original cohort who continue to persist will generally decrease over time.
2/ Caucasian ethnicity includes Portuguese.

Leeward Community College

Graduation Rate Highlights:

- One-third of degree-seeking students will earn a degree systemwide, the highest rate of all other UH community colleges. About 20% will graduate from Leeward while the remainder will graduate at other UH campuses.

- Beyond six years, an additional 7% will go on to earn a degree. Thus Leeward's graduation rate reaches 40% by the end of the eighth year, higher than the UHCC average of 32%.

- After six years, 23% will earn associate degrees and 10% will earn bachelors degrees. Over a six-year period, students average 3.2 years to graduate with an associate degree and 5.1 years to graduate with a bachelors degree. Students graduating from Leeward average 3.1 years.

- Transfer students have higher graduation rates than first-time students, 15% to 4% after two years and 35% to 32% after six years. Thus, average number of years to graduate is lower for transfers by about one year.

- Women outperform men in graduation rates, 35% to 29% systemwide, and 22% to 18% at the starting campus. Overall, men and women are comparable in the proportion that transfer to earn degrees at other UH campuses. Average number of years to graduate within six years is slightly lower for women.

- Chinese students have the highest graduation rate at 59%, followed by Japanese students with 39%, and Filipino students with 37%. Hawaiian students have the lowest rate with 23%. A greater proportion of Chinese and Japanese students transfer and graduate at other UH campuses than at the starting campus. On average, Caucasians take the least number of years to graduate, 2.5 years at the starting campus.

Persistence Rate Highlights:

- After one year, about 56% of entering students are still enrolled systemwide, 52% at Leeward and 4% at other UH campuses. As with graduation rates, these are the highest rates among all other UH community colleges.

- Men have higher persistence rates than women, 58% compared to 54% after one year. They maintain a higher rate throughout the period, but this may be attributed to higher overall graduation rates of women.

- Chinese students have the highest persistence rate, about three-fourths re-enroll after one year. Japanese students are next with 71% followed by Filipino students with 62%. After six years, 29% of Japanese students are still enrolled systemwide, 21% at other UH campuses.

1/ Average years to graduate can in a six year period can only be calculated for those cohorts that have been enrolled for six years or more. Therefore, from 1989 to 1993 data is not yet available.

2/ Numbers of graduates and the graduation rates calculated are culmulative from year to year.

1/ Average years to graduate can in a six year period can only be calculated for those cohorts that have been enrolled for six years or more. Therefore, from 1989 to 1993 data is not yet available.

2/ Numbers of graduates and the graduation rates calculated are culmulative from year to year.

1/ Numbers of students enrolled and the percentage of the original cohort who continue to persist will generally decrease over time.
2/ Caucasian ethnicity includes Portuguese.

Maui Community College

Graduation Rate Highlights:

- Systemwide, about 29% of degree-seeking students can be expected to earn a degree, just above the overall UH community college average. Of the 29%, about 19% will graduate at Maui while the remainder will graduate at other UH institutions.

- Beyond six years an additional 4% will go on to earn a degree, thus the systemwide graduation rate after eight years is 32%.

- Of those graduating over a six year period, the average number of years to graduate is 3.6 years. Students graduating from Maui average 3 years, while those who transfer and graduate from other UH campuses, most of which do so to earn a bachelors degree, average 4.9 years.

- Transfer students exhibit somewhat higher graduation rates than first-time students, 31% to 28% after six years. Average number of years to graduation is 3.5 years for transfers and 3.7 years for first-time students.

- Women outperform men in overall graduation rates, 31% to 22% after six years. A greater proportion of women remain at the starting campus to earn a degree, and take the same amount of time as men to do so at 3 years.

- Students of Chinese ancestry have the highest graduation rate at 52%, followed by Filipino students at 38%. Of all other ethnic backgrounds, students of Caucasian ancestry take the shortest time to earn a degree over a six-year period, averaging 3.2 years systemwide and 2.8 years at the starting campus. However, Caucasians have a greater tendency to remain at and graduate from Maui. Note: figures should be used with caution due to the small number of students within certain cohorts.

Persistence Rate Highlights:

- On average, about one-half of Maui's entering students are still enrolled systemwide after one year, 45% at Maui and 5% at other UH campuses, slightly below the overall UH community college average.

- After one year, 51% of women and 47% of men are still enrolled systemwide. Although women display significantly higher graduation rates, their persistence rates remain slightly higher than men. So despite the greater proportion of women graduating, there are still a greater proportion of women enrolled, especially at the starting campus.

- After one year, three-fourths of Chinese students are enrolled systemwide, the highest of all other ethnic backgrounds. Japanese students have the second highest rate at 63%, followed by Filipino students at 55%. A greater proportion of students with Chinese and Japanese backgrounds tend to transfer and persist at other UH institutions. As with graduation rates, due to the small number within certain cohorts, figures should be used with caution.

1/ Average years to graduate can in a six year period can only be calculated for those cohorts that have been enrolled for six years or more. Therefore, from 1989 to 1993 data is not yet available.

2/ Numbers of graduates and the graduation rates calculated are culmulative from year to year.

Table F-3b - detailed table

1/ Average years to graduate can in a six year period can only be calculated for those cohorts that have been enrolled for six years or more. Therefore, from 1989 to 1993 data is not yet available.

2/ Numbers of graduates and the graduation rates calculated are culmulative from year to year.

1/ Numbers of students enrolled and the percentage of the original cohort who continue to persist will generally decrease over time.
2/ Caucasian ethnicity includes Portuguese.

Windward Community College

Graduation Rate Highlights:

- On average, about 24% of degree-seeking students can be expected to graduate. About 13% will graduate at Windward while 11% will graduate at other UH campuses, 8% of which will earn a bachelors degree. Beyond six years, very few students go on to earn a degree; the systemwide graduation rate after eight years is 25%.

- For those graduating within a six-year period, the average number of years to graduate is equal to the UH community college average of 3.8 years. Students graduating from Windward average 3 years, while students earning a bachelors degree from other UH campuses average 4.7 years.

- Overall, transfer students exhibit higher graduation rates than first-time students, 11% to 4% after the second year, and 26% to 23% after the sixth year. Thus on average, transfers take less time to graduate within a six-year period, 2.8 years compared to 4.1 years for first-time students.

- Women display slightly higher graduation rates than men, 25% to 22% after six years. However, a greater proportion of women earn degrees at the starting campus, whereas men have a higher tendency to transfer and earn degrees at other UH campuses. Overall, women earn degrees in a shorter time period than men.

- Japanese students have the highest graduation rate at 33%, but only 10% graduate from the starting campus while the remaining 23% transfer and graduate at other UH campuses. Similar patterns can be seen in students of Hawaiian and Other ethnic backgrounds. In contrast, students of Chinese, Filipino, and Caucasian ancestry have a higher tendency to remain and graduate from the starting campus. Figures by ethnicity should be used with caution however, since certain cohorts are comprised of a very small number of students.

Persistence Rate Highlights:

- On average, close to 47% of entering students are still enrolled systemwide after one year, 41% at Windward and 6% at other UH campuses. From the third year onward, there are proportionately more students enrolled at other campuses than there are attending Windward, most of which have transferred to pursue a bachelors degree.

- First-time students display higher persistence rates than transfer students, due in part to higher graduation rates of transfers.

- Japanese students have the highest systemwide persistence rate at 65% after one year. After six years 25% are still enrolled, 20% at other UH campuses. Students of Caucasian and Mixed backgrounds have the lowest one-year persistence at 43% and 41% respectively.

1/ Average years to graduate can in a six year period can only be calculated for those cohorts that have been enrolled for six years or more. Therefore, from 1989 to 1993 data is not yet available.

2/ Numbers of graduates and the graduation rates calculated are culmulative from year to year.

Table G-3b - detailed table
STARTING CAMPUS GRADUATION RATES - as of Fall 1996
Windward Community College

1/ Average years to graduate can in a six year period can only be calculated for those cohorts that have been enrolled for six years or more. Therefore, from 1989 to 1993 data is not yet available.

2/ Numbers of graduates and the graduation rates calculated are culmulative from year to year.
